

**Realizing Better Outcomes  
Through The Power Of  
AUTOMATION  
&  
MACHINE  
INTEGRATION  
On The Plant Floor**

**AUTOMATION  
SOLUTIONS  
LLC**

# WHAT IS AUTOMATION?

The technique of making an apparatus, a process, or a system operate by mechanical or electronic devices.

ôdə,māt

action

verb

# Seven Key Reasons For Automation

AUTOMATION SOLUTIONS LLC

# Seven Key Reasons For Automation

1

**Risk of (or actual) failure to current machines.**

# Seven Key Reasons For Automation

1

**Risk of (or actual) failure to current machines.**

2

**Need to update inefficient equipment/components.**

# Seven Key Reasons For Automation

- 1 Risk of (or actual) failure to current machines.
- 2 Need to update inefficient equipment/components.
- 3 Inability to satisfy required throughput (increased demand).

# Seven Key Reasons For Automation

- 1** Risk of (or actual) failure to current machines.
- 2** Need to update inefficient equipment/components.
- 3** Inability to satisfy required throughput (increased demand).
- 4** Updated regulations & increased safety requirements.

# Seven Key Reasons For Automation

- 1** Risk of (or actual) failure to current machines.
- 2** Need to update inefficient equipment/components.
- 3** Inability to satisfy required throughput (increased demand).
- 4** Updated regulations & increased safety requirements.
- 5** Ability to monitor, track & report performance data.

# Seven Key Reasons For Automation

- 1 Risk of (or actual) failure to current machines.
- 2 Need to update inefficient equipment/components.
- 3 Inability to satisfy required throughput (increased demand).
- 4 Updated regulations & increased safety requirements.
- 5 Ability to monitor, track & report performance data.
- 6 Desire to reduce cost per unit.

# Seven Key Reasons For Automation

- 1** Risk of (or actual) failure to current machines.

AUTOMATION SOLUTIONS LLC

# A More Efficient Approach

# WHAT DO WE DO FOR OUR CUSTOMERS?

## OUR ACTIONS

- Upgrading antiquated or unsupportable control systems.
- Providing faster processes, machine data acquisition & storage.
- Creating innovative PLC & computer-based solutions.
- Building systems capable of being monitored remotely.

## OUR ACTIONS

- Upgrading antiquated or unsupportable control systems.

# Machines Don't Discriminate

A photograph of a beer production line. In the foreground, a curved conveyor belt is filled with numerous aluminum cans of beer, each with a different colored label. The cans are arranged in neat rows. In the background, the factory floor is visible with various equipment, including a yellow chair and some shelving units.

**BEER**

A photograph of a large industrial cement silo. The silo is a tall, cylindrical structure made of metal, with a hopper at the bottom for dispensing cement. It is supported by a complex metal framework. The background shows a clear sky and some distant trees.

**CEMENT**

A photograph of an industrial adhesive dispensing machine. The machine is white and features a large, curved dispensing arm with multiple nozzles. It is connected to various pipes and hoses, and is situated in a factory environment.

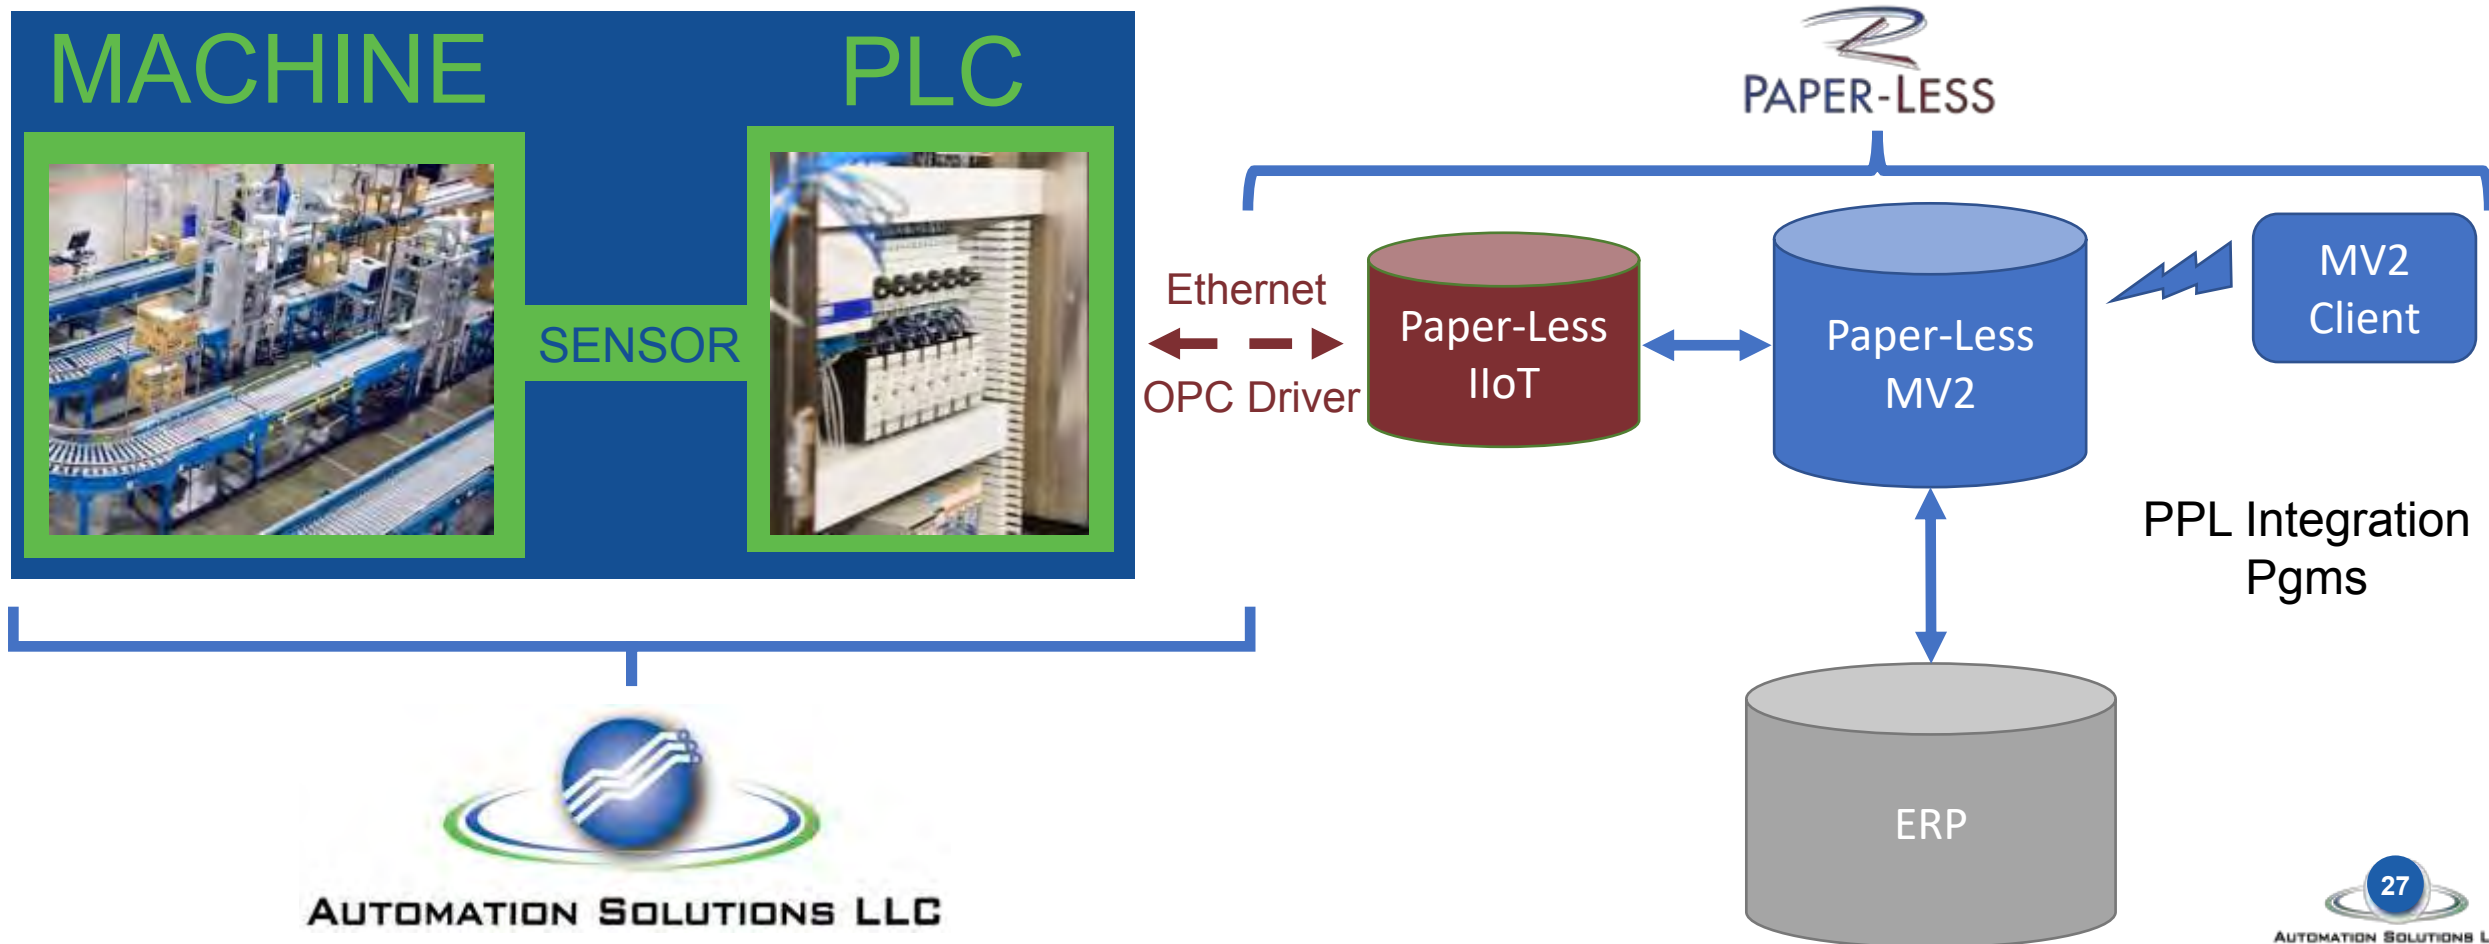

**ADHESIVE**

# How Do We Talk To Machines?

Our innovative solutions provide transparent access to PLC data - modernizing your existing machines & allowing the transfer of data.

# Benefits Of Accessing This Data

# Benefits Of Accessing This Data

**1 Allow key personal to access/monitor via display screens.**

# Benefits Of Accessing This Data

- 1 Allow key personal to access/monitor via display screens.**
- 2 Maintain a history of machine performance.**

# Benefits Of Accessing This Data

- 1 Allow key personal to access/monitor via display screens.**
- 2 Maintain a history of machine performance.**
- 3 Analyzing parts wear to predict & prevent failures.**

# Benefits Of Accessing This Data

- 1 Allow key personal to access/monitor via display screens.
- 2 Maintain a history of machine performance.
- 3 Analyzing parts wear to predict & prevent failures.
- 4 Sense abnormalities (*heat, vibration, etc.*) a human may not notice.

# Benefits Of Accessing This Data

- 1 Allow key personal to access/monitor via display screens.
- 2 Maintain a history of machine performance.
- 3 Analyzing parts wear to predict & prevent failures.
- 4 Sense abnormalities (*heat, vibration, etc.*) a human may not notice.
- 5 Store “tribal knowledge” vs. specific employee “know how.”

# Benefits Of Accessing This Data

- 1 Allow key personal to access/monitor via display screens.
- 2 Maintain a history of machine performance.
- 3 Analyzing parts wear to predict & prevent failures.
- 4 Sense abnormalities (*heat, vibration, etc.*) a human may not notice.
- 5 Store “tribal knowledge” vs. specific employee “know how.”
- 6 Monitor inventory levels; notify purchasing to place orders.

# Benefits Of Accessing This Data

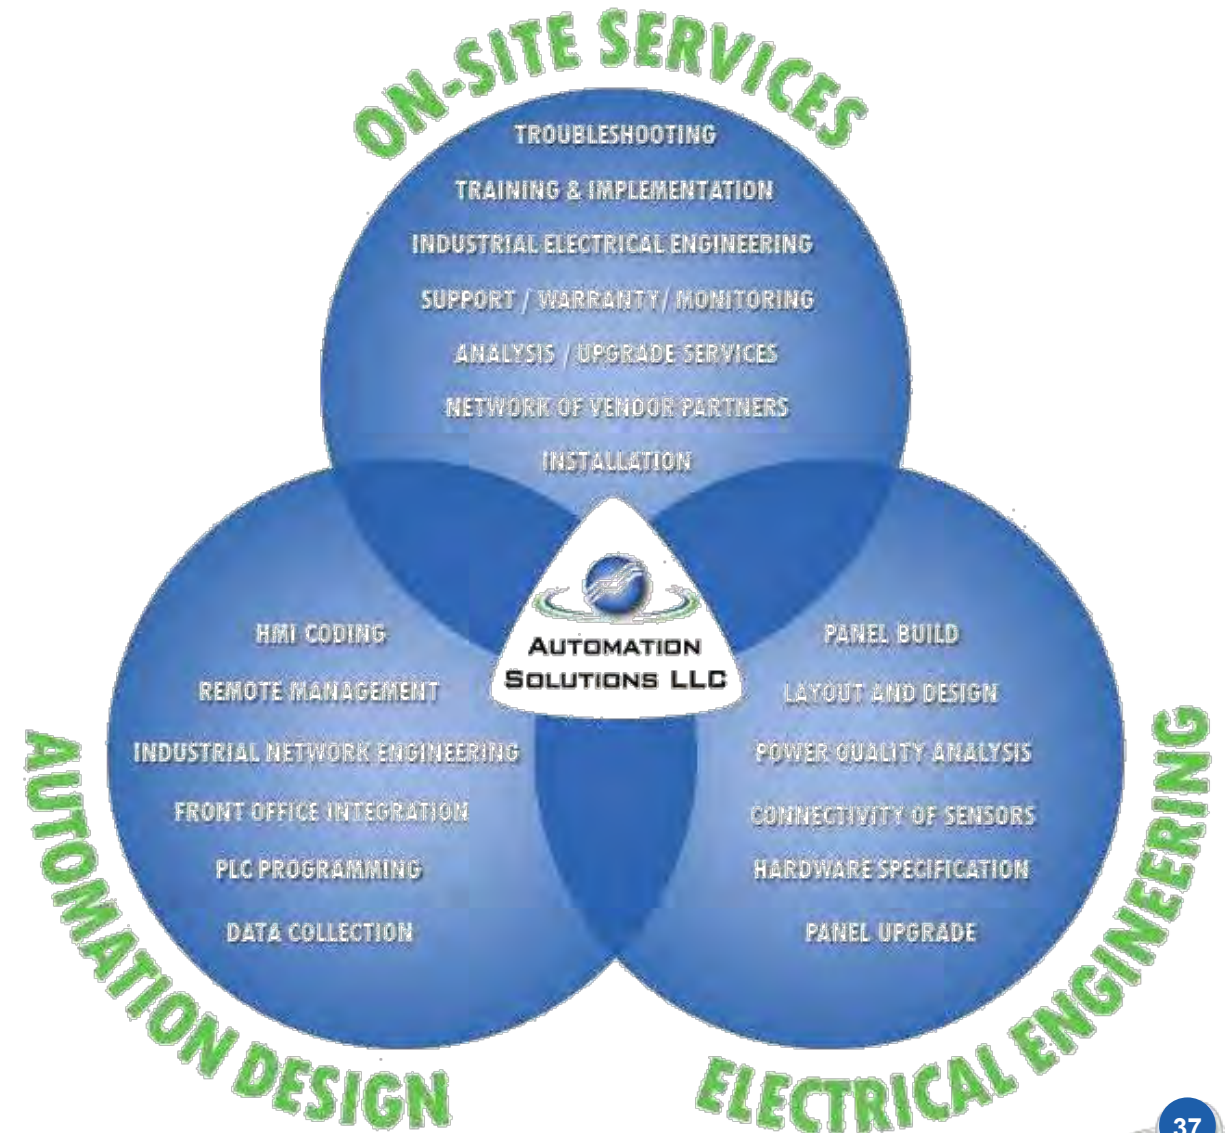

- 1 Allow key personal to access/monitor via display screens.
- 2 Maintain a history of machine performance.
- 3 Analyzing parts wear to predict & prevent failures.
- 4 Sense abnormalities (*heat, vibration, etc.*) a human may not notice.
- 5 Store “tribal knowledge” vs. specific employee “know how.”
- 6 Monitor inventory levels; notify purchasing to place orders.
- 7 Identify bottlenecks in your manufacturing process -  
downtime, inefficiencies, improper ingredient/part usage, etc.

# HOW ARE WE DIFFERENT?

We are a **BOUTIQUE**  
“one stop shop”  
systems integrator  
offering  
in-house engineering,  
panel-building &  
installation services.

1

# Our Process

## PRE-SALES ENGINEERING

- Understanding unique business challenges
  - Aligning budgets to ROI goals
- Proposing optimized “path to success”

1

## PRE-SALES ENGINEERING

- Understanding unique business challenges
  - Aligning budgets to ROI goals
- Proposing optimized “path to success”

2

## PROJECT SCOPING

- Providing custom functional specification
- Mapping the “path to success” across four key stage gates

# WHAT IMPACT CAN YOUR BUSINESS EXPECT?

# Remember Our Three Examples...

- Increased Brewery's output by +40%.
- Eliminated batch & recipe variance.
- Reduced training costs for complex processes.
- Decreased the number of skilled laborers required.
- Ability to monitor & execute both on-site and remote.
- Installed lock-down PLC logic security.

- Higher degree of safety measures.
- Allows for even distribution of manual labor (social distancing).
- Improved quality; reduced product variability.
- Custom solution less expensive than “off the shelf” products.
- Less waste and decreased cost of goods.
- On and Off-Site monitoring.

- Doubled production output.
- Reduction in the cost of manual labor.
- Less variability in product consistency.
- Process can run remote; uses less people in confined spaces.
- Cohesive integration of existing and new hardware.
- State of the art facility is future-proof.

# THANK YOU
